

March 2018 Release Notes

Build 17726 on CMS released Wednesday 03.07.18

+ Updates in this Release +

Reminder for the change to the release schedule and announcing developer tools in V3 this month.

Release Schedule Update Reminder

In order to serve our customers better and move toward continuous delivery, as of the March 7th, 2018 release, we will begin releasing on a two-week cycle. After this week's release, the next one will be March 21st, 2018.

More frequent deliveries for both features and bug fixes is aimed to improve:

- Reducing the length of the feedback cycle
- Risk Reduction
- Higher quality releases

Due to this update, the release notes will be changed. Going forward, each release will have an abbreviated release note posted in the Crownpeak Knowledge Base. Emails will not be sent for these releases. Approximately every two months, we will send a retrospective email which will contain a feature compilation along with a short video showcasing the updates.

+ Other Improvements +

1. A Connector can be created without error (OCD-4237)
2. A search can be performed within the Route Assets panel (OCD-6110)
