

May 31, 2018 Release Notes

Build 24888 on CMS released Wednesday 05.31.18

+ Updates in this Release +

1. Conversations - The Conversation Panel is now available in V3. Conversations is an exciting new feature allowing users to interact through asynchronous communication about specific assets to aid in workflow, content maintenance and general communications and content related activities. This feature is available in V3 only. Images can be cropped and scaled to a specified width and height.
2. Debug Console - The Debug Console is now available in V3. The Debug Console offers an easy way to identify and troubleshoot why a specific asset isn't working or behaving as expected, by running the code found in the underlying templates and library files through a comprehensive code analyzer. As a Developer, you can take full advantage of Crownpeak's new Debug Console to do the heavy lifting of code analysis for you.
3. Images can be automatically re-sized. (OCD-7280)
4. Number of publishing retry errors is reduced in DXM. (OCD-7942)
5. Fixed deployment issue with DQM workflow integration. (OCD-7923)
6. When editing an image, left arrow is no longer covered by text icon. (OCD-7755)
7. Child context menu dropdown no longer remains open after moving away from parent. (OCD-3842)
8. Upload, save, and validation issues for Avatars are fixed. (OCD-7015)
9. Removed same folder and same template workflow conflict transition option. (OCD-6584)
