

January 2018 Release Notes

Build 14104 on CMS released Wednesday 01.10.18

+ Updates in this Release +

This month we offer the third component of Version Comparison along with a wide range of improvements to the CMS. .

Version Comparison - Visual

In the December release, the Source and Content components of Version Compare windows were available. This month, we present the third component: Visual Compare

This is a very powerful feature as it allows you to view the differences between two versions of your web page. By using Version Compare you can easily see what differences have been made, which will allow you to revert to a previous version or allow you to simply view the changes.

To compare asset versions, complete the following:

- 1. Go to [View] [Properties] to open the properties panel
- 2. Click **[Versions]** to open the Version Compare window
- 3. Select two versions of the asset you would like to compare
- 4. Click the [Actions] dropdown and select [Compare Versions Visual] (Figure 1)
- 5. The compare window will be displayed with blue/pink indicators for the added and removed items.
- 6. To revert to a version. Select **[Revert to this Version]** in the upper right of the center panel.
- 7. You can also view the other version compares by clicking [Source] or [Content] at the top of the panel.
- 8. To close the version compare panel, click [Cancel Versioning]
