1   Release notes

The **CorporateDatabase** module distributes selected data records from one FirstSpirit™ project to another. The installation, configuration, and user documentation can be found in the following documents:

1. Installation and configuration for administrators
   (***ARITHNEA_FS_CorporateDatabase_installation_EN_v2.0.122.pdf***)
2. Script development for template developers
   (***ARITHNEA_FS_CorporateDatabase_developerguide_EN_v2.0.122.pdf***)
3. User guide for editors (***ARITHNEA_FS_CorporateDatabase_userguide_EN_v2.0.122.pdf***)

This document provides a list of features and fixed bugs, sorted according to the relevant version of **CorporateDatabase**.

ARITHNEA

2   CorporateDatabase version 2.0

2.1   New features

- Support of FirstSpirit™ 5
- Simplified configuration - less connection information has to be entered manually and references to other database tables are recognized automatically
- Automatic check of the connections to a FirstSpirit™ projects and database tables in the configuration
- Automatic creation of the field *globalId* when a table is configured
- Improvements in the error handling and logging

2.2   Fixed bugs

The following bugs have been fixed since version 1.3

ID	Role	Category	Description
V1.3	Administrator	Administration	It was possible to use the same table in the same project for different units, which could cause conflicts during the distribution. Now **CorporateDatabase** checks if conflicts exist when saving the configuration.
V1.3	Administrator	Administration	Incorrect configuration files could cause problems when opening the configuration dialog. Now incorrect parts of the file will be corrected and reset to default / empty values. This ensures that the configuration dialog is available in any case.
V1.3	Editor	Client	It was possible to execute the CorporateDatabase script on any table, even if the table was not configured. The script didn't return an error message if the table was not configured.
V1.3	Administrator	Administration	The buttons "Cancel", "Apply", and "Export to file" for the Unit were visible while editing / creating a table. This buttons are not necessary in this dialog and therefore have been removed.
V2.0	Administrator	Configuration	It was impossible to load the configuration if the file was completely empty.
