## Notes for updating to a new version

In case no other update instructions are given, an update to the next version is done by replacing the WAR file on the application server and the FSM module within the FirstSpirit server.

### 1.4.0 (16.09.2014)

To update to this version it is necessary to run the SQL script update\_1.3.4\_1.4.0.sql, which is located under sql/update.

Version 1.4.0	
Category	Description
Feature	FirstSpirit 5.1 Support
Feature	Configurable SocialNetworking-Alerts
Feature	Alert-Dashboard
Feature	Warning for unpublished Content
Feature	Posting Administration (Search Dashboard)
Feature	Bitly is configurable for each channel separately
Feature	Facebook-pages comment replies
Feature	Executable startscript, that will be installed at FSM installation
Feature	Configurable Proxy
Feature	SocialNetworking Web Application Integration as FirstSpirit-Web-Application
Feature	Configurable resolutions for pictures
Bug fix	Communcation with Facebook via Proxy
Bug fix	Berechtigungskonzept

### 1.3.4 (10.05.2013)

To update to this version it is necessary to run the SQL script update\_1.3.0\_1.3.4.sql, which is located under sql/update.

Version 1.3.4	
Category	Description
Bug fix	Bug-fixes for the certification

### 1.3.3 (09.04.2013)

Version 1.3.3	
Category	Description
Bug fix	Bug-fixes for the certification

### 1.3.2 (26.03.2013)

Version 1.3.2	
Category	Description
Bug fix	Bug-fixes for the certification

1.3.0 (20.12.2012)

To update to this version it is necessary to run the SQL script update\_1.2.0\_1.3.0.sql, which is located under sql/update.

Version 1.3.0	
Category	Description
Feature	added channel-specific dashboards displaying statistics for each social media channel separately
Feature	added a client to access the SocialNetworking remote API from Java applications
Feature	added access to facebook posts via remote API (can be used to implement a "Facebook Stream")
Feature	added support of FirstSpirit 5

Feature	added support of FirstSpirit input component CMS_INPUT_PAGEREF
Bug fix	corrected a bug when publishing pictures to facebook (pictures will now be published only to the photo album)
Bug fix	several minor bug fixes
Bug fix	corrected several minor design bugs

### 1.2.4 (25.04.2012)

Version 1.2.4	
Category	Description
Bug fix	FirstSpirit sessions, are now always closed correctly.
Bug fix	Overlong texts are shortened while transferred from FirstSpirit.
Bug fix	Small design bugs fixed.

1.2.0 (03.05.2012)

To update to this version it is necessary to run the SQL script update\_1.1.0\_1.2.0.sql, which is located under sql/update.

Version 1.2.0	
Category	Description
Feature	Same content element can be published to different social media accounts of same type. (e.g. multiple Facebook accounts)
Feature	Remote API for integration of social media publication from within FirstSpirit deployments or workflows.
Feature	Improved dashboard charts.
Feature	Improved UrlResolver. Links to detail pages of content projections can be created. Feature can be activated by template mapping (*.link.detail).
Feature	Bit.Ly-Links can now be identified on a per post and per channel basis. Each post now uses a unique link click counter per channel.
Feature	Facebook and Twitter publications can be deleted now.
Feature	New configuration option „offline.mode“ added, to hide some functionalities which require online access.
Feature	Logout button for social media channels added, to prevent the accidental usage of credentials belonging to a prior created account, while creating a new account.

1.1.1 (15.03.2012)

Version 1.1.1	
Category	Description
Feature	Support for PostgreSQL
Feature	Click count of published links is counted on a per post basis. Same link can be published in different posts, without distorting statistics.
Bug fix	Top lists on dashboard show the last 24 hours now, too.

## 1.1.0 (02.03.2012)

Version 1.1.0
