Release notes FirstSpirit – FormEdit[5.8]

Upgrade Information

For the case that an older version of the module is already installed, the page templates, the paragraph templates, the link templates and the scripts must be upgraded manually. Install the module into an empty project and copy the templates into the existing project.

> **!** *The configuration of a form is no longer persisted in the page and passed as request-parameter. The configuration is stored on the server in the formlogger.ini instead. This leads to the fact that the webapplication needs to be restarted, as soon as there are changes in the form configuration (form_start-section), so that the servlet can read the new configuration.*

New Features

ID	Category	Description
FORM-28	Extension	The form configuration is no longer persisted in the page.

Compatibility

Product	Version(s)	Notice
FirstSpirit	>= 5.0
