Release Notes for BP for FirstSpirit 4.20

Fixed bugs

Summary	Short Description
Security Filter does not correctly extract roles from media roles list	The Security Filter protects media files in FIRSTspiritWeb from unauthorized access by using a json file created by the media permission script. The Filter did not properly process the roles contained in the json file and thus denying access to files even though a user had the proper role assigned. This problem has now been fixed.
Unicode characters beyond U+00FF are incorrectly displayed in "EMBEDDED" isolation mode	Unicode characters on HTML or JSP content pages beyond codepoint U+00FF were not displayed correctly when its navigation node was set to "EMBEDDED" isolation mode. This problem has now been fixed.
