2 Database Pool Version 1.0	7
2.1 New Features	7
2.1.1 Sending database content to different FirstSpirit™ projects.....	7
2.2 Fixed Bugs.....	7

Release Notes

The **CorporateDatabase** module allows you to send database content from one FirstSpirit™ project to another and reuse it there. E.g. news and press releases can easily be sent to different domains of your internet presence.

This document describes the newly realized features and changes of the **CorporateDatabase** module.

ATTENTION:

The version 1.0 of the **CorporateDatabase** module was the initial version. Therefore the information for version 1.0 in this document only provides a blueprint showing the structure future release notes will use.

CorporateDatabase Version 1.2

New Features

Distribution overview

CorporateDatabase provides a graphical component showing, which data records are distributed to which projects. This component can be included into the template of a data record. The editor can see, if the data record is available in another project and if it was modified there.

Distribution of complete Tables

CorporateDatabase provides a function, which distributes all data records of a table at one time.

Automatic distribution of tables

The content of a table can be distributed regularly by a scheduler. This function can be used to run regular automatic synchronizations between tables.

Secure connection

It is possible to constrain the access to the FirstSpirit™ server to secure connections. Therefore **CorporateDatabase** acting as a client is able to connect using HTTPS.

Templates for new Units

It is possible to use an existing unit as a template for a new unit. The configuration of the new unit will be prefilled with the values of the existing one. In many cases this will highly reduce the effort of configuring the new unit.

Tooltips

Tooltips have been inserted to provide extra information in the configuration GUI and support the administrator.

Advanced Table configuration

The „overwrite“ and „direct release“ option on a table can be set in general or specifically for each project that is allowed to write to the table. Now this behavior can be set project specific.

ID Matching

If the data source elements that get distributed are already used in the source project, they get new referenced in the target unit(s).

Fixed Bugs

The following bugs were fixed in version 1.1 of the **CorporateDatabase** module.

ID	Role	Category	Subcategory	Description
V1.1.0_1	Administrator	Administration	None	It was possible to use the same table in the same project for different units, which could cause conflicts during access of the table. CorporateDatabase will check the configuration for this problem now and enforce the tables in different units to be disjunct.
V1.1.0_2	Administrator	Administration	None	Corrupt configuration files could cause problems when opening the configuration dialog. Now corrupt parts of the file will be corrected and reset to default / empty values. This ensures that the configuration dialog is available in any case.
V1.1.0_3	Editor	Client	None	It was possible to start CorporateDatabase on a table not configured for CorporateDatabase . The distribution didn't start, which is the correct behaviour. The feedback for the user nevertheless was missing. A popup message has been implemented to show the user that the contents couldn't be distributed and why.
V1.1.0_4	Administrator	Administration	None	In rare cases it was possible that the list of units/tables in the configuration GUI was not updated properly. This problem has been solved.
V1.1.0_5	Administrator	Administration	None	The buttons "Cancel", "Apply" und "Export to file" for the Unit were visible while editing/creating a table. This buttons are not necessary in this dialog and therefore have been removed.

CorporateDatabase Version 1.0

New Features

Sending database content to different FirstSpirit™ projects

CorporateDatabase provides the possibility to individually select data from the FirstSpirit™ database and send it to other FirstSpirit™ projects. How to install and use the module is described in the following documents:

1. Installation and configuration for administrators
(ARITHNEA_FS_CorporateDatabase_installation_EN_v1.2.pdf)
2. Script development for template developer
(ARITHNEA_FS_CorporateDatabase_developerguide_EN_v1.2.pdf)
3. User guide for editors (ARITHNEA_FS_CorporateDatabase_userguide_EN_v1.2.pdf)

Fixed Bugs

The version 1.0 is the initial version of the **CorporateDatabase** module. Therefore no bugfixes are reported in this section.

In future versions fixed bugs will be tabular listed in this section (see table below).

ID	Role	Category	Subcategory	Description
1	All Users	Administration	None	Description of the bug with the ID1
2
