11.34 Template Development..... 46

1 General

1.1 The manner in which connection settings are configured has been optimized for users.

It is now possible to allocate considerably more memory for FirstSpirit desktop applications (SiteArchitect, ServerManager) in the connection settings.

The connection settings now also contain recommended values for memory (2048 MB), compression (deflate speed), and encryption (TLS), which are prepopulated for users.

Note: If the connection settings were already modified in the past or activated via the “Use settings” option, then the existing values are retained.

2 ContentCreator

2.1 Image upload now also from other browser windows/tab

Uploading images is possible in many places in ContentCreator, e.g.:

- via the menu function “Upload new medium”
- in the Media administration
- via the input elements (if configured accordingly; both via form and via the (preview) page itself)
 - FS_REFERENCE
 - CMS_INPUT_IMAGE_MAP
 - FS_BUTTON
- via the “Edit image” function on images in reports and in the navigation bar

In addition to an upload from the workstation, images can now also be uploaded from other browser windows/tabs in the ContentCreator.

This requires that the server that delivers the image allows cross-origin requests. Otherwise an error message will be displayed.

If the mouse pointer is held over an area of a preview page where an image can be dropped, this area will be framed.

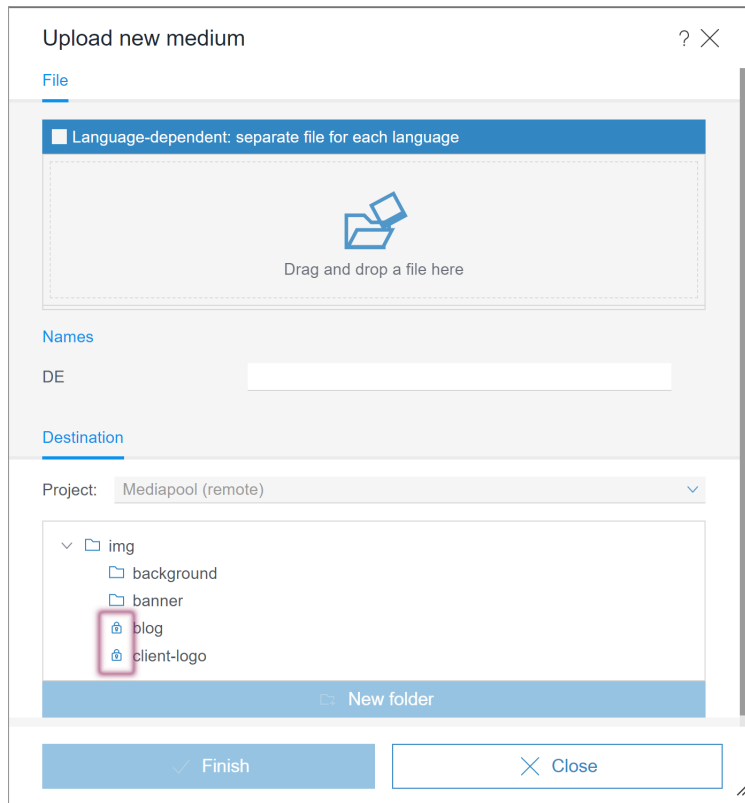

For more information, see the “Documentation for FirstSpirit ContentCreator” (<https://docs.e-spirit.com/contentcreator/editing-preview/media/index.html#upload>)

2.2 Upload of media with insufficient permissions

if configured accordingly, media can be uploaded using the FS_REFERENCE and CMS_INPUT_IMAGE_MAP input components (upload attribute).

If the current user does not have sufficient permissions to upload the medium (using drag-and-drop or the “New medium” or “Upload image” icon), this is now indicated in the “Upload new medium” dialog by padlock symbols, e.g.:

A node with this icon cannot be selected, so closing the dialog using “Finish” is not possible.

Previously, the lack of permissions was not indicated until the dialog was saved or closed. Error message:

```
Upload failed.  
You do not have sufficient permissions to store the medium in the selected folder.
```

If several (remote) projects are allowed as target (<PROJECTS> tag), an upload is now possible in ContentCreator via FS_REFERENCE and CMS_INPUT_IMAGE_MAP even if the permissions set for one project are insufficient.

Previously, an upload was rejected with this error message:

```
An unexpected error occurred.
```

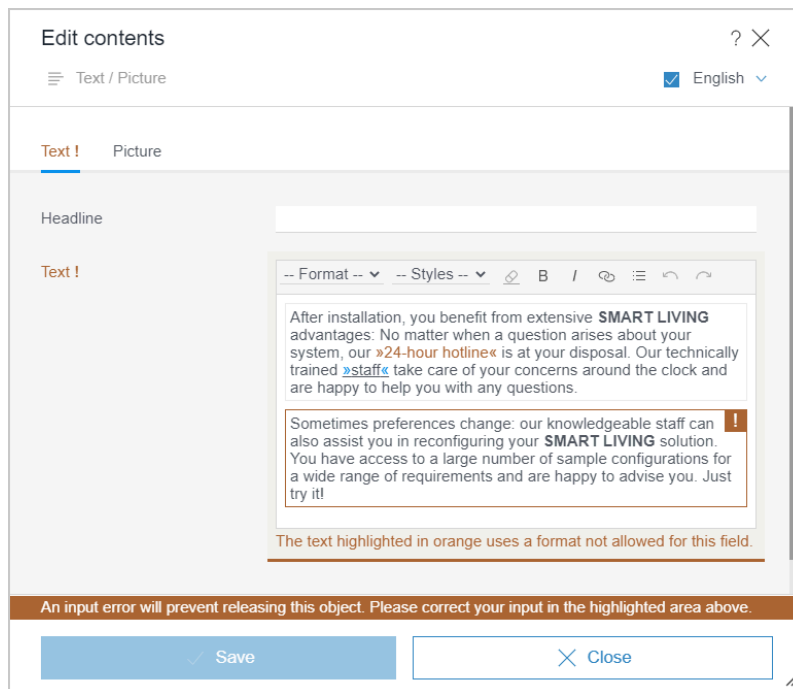

2.3 Visualization of invalid format templates (CMS_INPUT_DOM/TABLE)

As of FirstSpirit 2021-02, a colored marking of invalid formatting in the rich text editor has been introduced:

- orange marking: This concerns a format template which exists in the project but is not permitted for the respective rich text editor.
- red marking: This concerns a format template that has been subsequently deleted or is unknown for some other reason.

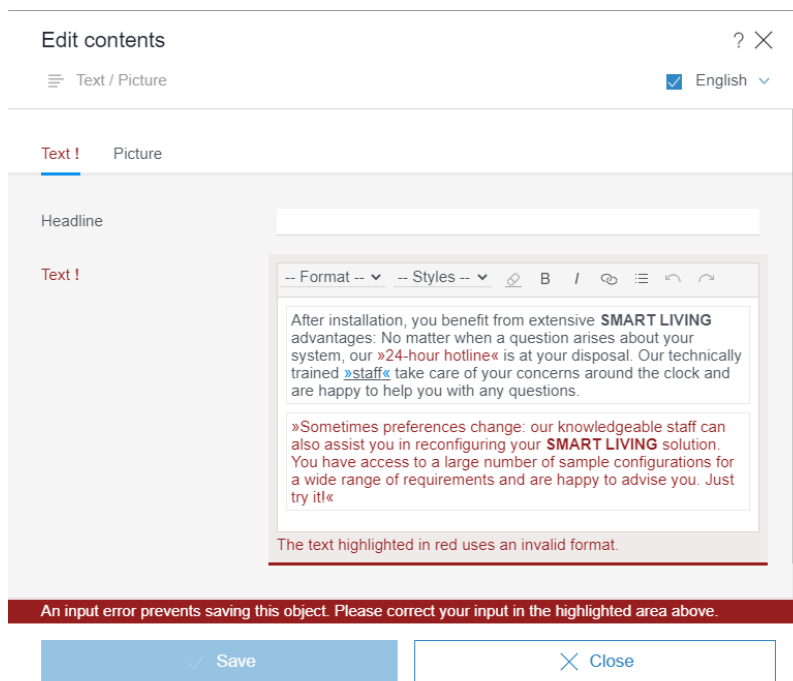

With the current release, the visualization has been marginally adjusted:

orange marking:

red marking:

3 Input components

3.1 An input component used that is not available on the server (anymore) is identified as incorrect

Using input components that are not available on the server (anymore) no longer causes the entire form to be shown as incorrect; only the unknown input component is displayed as incorrect.

The missing component is identified in the form by the following text:

```
Display errors in the editor (...). There is no component registered as (...)!
```

The following principles apply to missing input components within a form:

- If an unknown input component is used, this does not affect other input components in the relevant form; it is now possible to edit and save corresponding nodes.
- When saving, it is ensured that the content of the unknown input component is not modified.

- If the unknown input component is post-installed on the server (e.g., FS_MARKDOWN) or replaced by a compatible input component (e.g., FS_LIST) later, then the relevant content will be available once more. This method ensures that, despite the input components being unsupported, there will be no loss of data.
- It is not possible to output the content of an unknown input component in the preview or the generation.
- If an unsupported input component (e.g., FS_LIST) in a dataset is used to reference another dataset via a foreign key relationship, the corresponding dataset cannot be saved. In this case, a corresponding error message is displayed to the editor.
Background: A save operation in this instance would lead to data loss, since information is not available on the referenced datasets.

4 FirstSpirit Content Experience Tools (CXT)

4.1 Latest module versions

FirstSpirit 2021-03 supports the following module versions for “FirstSpirit Content Experience Tools”:

Module / file name	Version number
FirstSpirit CXT DAP Bridge	1.38
<code>dataservice-[version].fsm</code>	
FirstSpirit CXT FragmentCreator	2.21
<code>fragment-creator-[version].fsm</code>	
FirstSpirit Fragment DAP	1.35
<code>fragmentdap-[version].fsm</code>	
FirstSpirit Media DAP	1.28*
<code>mediadap-[version].fsm</code>	
FirstSpirit PageRef DAP	1.6
<code>pagerefdap-[version].fsm</code>	
FirstSpirit Markdown Editor	1.26*
<code>markdown-editor-[version].fsm</code>	
FirstSpirit Tagging Editor	1.26
<code>tagging-editor-[version].fsm</code>	
FirstSpirit CXT FragmentCreator - CaaS Integration	1.27

caas-integration-[version].fsm

* These modules require FirstSpirit 2020-03 or higher from this version.

4.2 FragmentCreator: Displaying input components side by side or in groups

As of the current release, new display options for input components have been created for greater clarity in the FragmentCreator:

Display side by side (noBreak)

By default, input components in FragmentCreator are displayed in one line each.

As of the latest release, input components can now be displayed side by side as well, e.g.:

DESCRIPTION News	
NAME Mads	LAST NAME Mikkelsen
DATE 15.02.2021	NUMBER 12345

To achieve this, the input components

- CMS_INPUT_TEXT
- CMS_INPUT_NUMBER
- CMS_INPUT_DATE

now support the `noBreak` attribute.

This attribute can be used to suppress the automatic line break after an input component.

To suppress the automatic line break, assign the value `yes`:

```
noBreak="yes"
```

Example:

```
...
<CMS_INPUT_TEXT name="author1" noBreak="yes">
  <LANGINFOS>
    <LANGINFO lang="*" label="Name"/>
  </LANGINFOS>
</CMS_INPUT_TEXT>

<CMS_INPUT_TEXT name="author2">
  <LANGINFOS>
    <LANGINFO lang="*" label="Last name"/>
  </LANGINFOS>
</CMS_INPUT_TEXT>

<CMS_INPUT_DATE name="creationDate" mode="date" noBreak="yes">
  <LANGINFOS>
    <LANGINFO lang="*" label="Date"/>
  </LANGINFOS>
</CMS_INPUT_DATE>

<CMS_INPUT_NUMBER name="number" type="double">
  <LANGINFOS>
    <LANGINFO lang="*" label="Number"/>
  </LANGINFOS>
</CMS_INPUT_NUMBER>
```

The default value for `noBreak` is *no* (i.e.: no wrap).

Note: If the width is too small (i.e. not all of the input components will fit in the intended line), form lines will be broken even if `noBreak="yes"` has been set; this is to ensure a minimum width for the input components.

The option of extending the input components across the full width (`hFill` attribute) is not supported.

Groupings (CMS_GROUP)

`CMS_GROUP` is used to group input components of a form graphically in order to achieve a better overview.

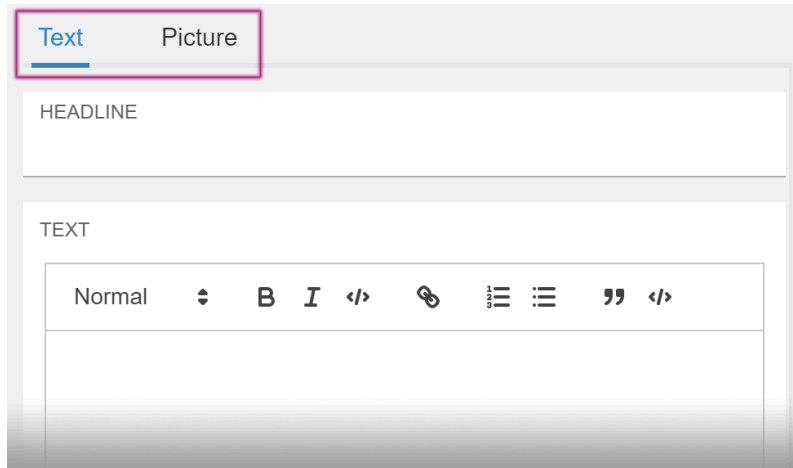

Input components can be displayed

- on several tabs

- among each other with frames

As of the current release, CMS_GROUP is also supported in FragmentCreator.

Code example:

```
<CMS_MODULE>
  <CMS_GROUP name="group" tabs="top">

    <CMS_GROUP name="text">
      <LANGINFOS>
        <LANGINFO lang="" label="Text"/>
      </LANGINFOS>

      <CMS_INPUT_TEXT name="headline" useLanguages="no">
        <LANGINFOS>
          <LANGINFO lang="" label="Headline"/>
          <LANGINFO lang="DE" label="Überschrift"/>
        </LANGINFOS>
      </CMS_INPUT_TEXT>

      <FS_MARKDOWN name="markdown">
        <LANGINFOS>
          <LANGINFO lang="" label="Text"/>
        </LANGINFOS>
      </FS_MARKDOWN>

    </CMS_GROUP>
  </CMS_MODULE>
```

```
<CMS_GROUP name="picture">
  <LANGINFOS>
    <LANGINFO lang="" label="Picture"/>
    <LANGINFO lang="DE" label="Bild"/>
  </LANGINFOS>

  <FS_INDEX name="picture">
    <LANGINFOS>
      <LANGINFO lang="" label="Picture"/>
      <LANGINFO lang="DE" label="Bild"/>
    </LANGINFOS>
    <SOURCE name="FirstSpiritMediaAccess/Connector"/>
  </FS_INDEX>

  <CMS_INPUT_TOGGLE name="toggle">
    <LANGINFOS>
      <LANGINFO lang="" label="Alignment"/>
      <LANGINFO lang="DE" label="Ausrichtung"/>
    </LANGINFOS>
    <OFF>
      <LANGINFO lang="" label="Right"/>
      <LANGINFO lang="DE" label="Rechts"/>
    </OFF>
    <ON>
      <LANGINFO lang="" label="Left"/>
      <LANGINFO lang="DE" label="Links"/>
    </ON>
  </CMS_INPUT_TOGGLE>

</CMS_GROUP>

</CMS_GROUP>

</CMS_MODULE>
```

Attributes:

- **name:** This optional attribute can be used to specify a technical identifier for the grouping. Unlike identifiers of input components (also attribute name), the identifier for CMS_GROUP does not have to be unique within a form.
- **tabs:** By default, groupings are displayed with frames below each other. To display them on individual tabs, use `tabs="top"`.

- **scrollable:** This optional attribute can be used to specify whether scrollbars should be displayed or not.
Possible values are:
fixed: Do not use scrollbars.
vertical: Use vertical scrollbars.
horizontal: Use horizontal scrollbars.
both: Use horizontal and vertical scrollbars.
- **height:** This optional attribute can be used to specify the display height of the grouping in pixels.
If the parameter is not specified, the height is based on the included input components.
- **LANGINFOS / LANGINFO:** These tags are used to define the label.
If these tags are not specified, no label is displayed for the grouping.

Note The values *left*, *bottom* and *right* for the `tabs` attribute, which can be used to display tabs on the left, right or bottom in the SiteArchitect, are **not** taken into account for the display in the FragmentCreator.

4.3 Generating referenced elements from remote projects

“FirstSpirit Content Experience Tools” (CXT) enables elements from other projects (known as “remote projects”) to be referenced: fragments, media, and page references. The “FirstSpirit Fragment DAP” (`fragmentdap-[version].fsm`), “FirstSpirit Media DAP” (`mediadap-[version].fsm`), or “FirstSpirit PageRef DAP” (`pagerefdap-[version].fsm`) modules are used for this purpose.

When generating a FirstSpirit project in which elements have been referenced via these modules, the released status of the referenced element is now taken into account.

Previously, a new revision would first need to be created in the FirstSpirit project performing the generation, so that (released) changes to the remote fragments referenced therein would be taken into account in a generation process.

This change means historic states of the referenced elements cannot be generated any more (via

```
context.setStartTime(<Date in the past>);
```

in a script preceding the generation job).

5 Compatibility

5.1 Modules and extensions for FirstSpirit 2021-03

The following modules and extensions are compatible with FirstSpirit 2021-03:

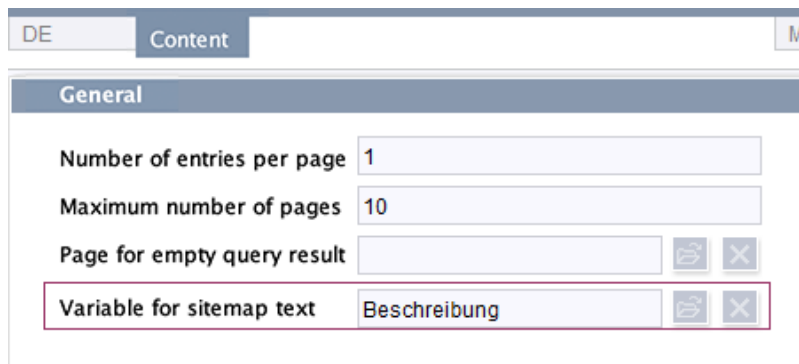

Module name/File name	Version number	Compatibility
FirstSpirit Update Archive fs-update- [version].tar.gz	1.0.12	-
FirstSpirit Install Archiv fs-install- [version].tar.gz	1.0.12	-
FirstSpirit Launcher FSLauncher.exe	1.0.38	as of FirstSpirit 2018-08
FirstSpirit Launcher JRE module fs-launcher-jre- [version].fsm	1.16	as of FirstSpirit 2020-11
FirstSpirit SAML Login module fs-saml-login- [version].fsm	1.1	as of FirstSpirit 2019-02
FSDevTools fs-cli-[version].tar.gz fs-cli-[version].zip	2.6.6	as of FirstSpirit 2020-08
FirstSpirit Module Gradle Plugin firstspirit-module- gradle-plugin- [version].jar	1.0.0	as of FirstSpirit 2019-06

6 SiteArchitect

6.1 Improved support for the "Variable for sitemap text"

The manner in which database content is output on the page can be controlled for page references that link to pages with an embedded data source. When the page reference is selected in FirstSpirit SiteArchitect, the "Content" tab is also shown in the editing area, next to the project language tabs.

The screenshot shows a configuration window with a 'Content' tab selected. Under the 'General' section, there are four input fields: 'Number of entries per page' (value: 1), 'Maximum number of pages' (value: 10), 'Page for empty query result' (empty), and 'Variable for sitemap text' (value: Beschreibung). The 'Variable for sitemap text' field is highlighted with a red border.

Setting at page reference level (Content tab)

The “Variable for sitemap text” setting can be used to select a column from the data source. The content of this column is then output for displaying/labeling the referenced page in a sitemap (see [Documentation: Settings at page reference level](#)). This setting can be used to dynamically design the output of page references in a menu overview, in page groups, on multiPages, or for navigation purposes (see, e.g., [Documentation: Navigation/multiPages](#)).

New behavior:

In FirstSpirit 2021-03 and higher, also available for selection for the “Variable for sitemap text” setting is database content whose values are maintained in FirstSpirit in complex input components (e.g., `CMS_INPUT_DOM`). The FirstSpirit framework attempts to only output the values that are relevant in this context automatically. This means, for example, formatting is automatically removed and only plain text is output for the value of an input component with type `CMS_INPUT_DOM`.

- !** The new behavior is not possible or appropriate for all configurations (see below for restrictions). When switching a configuration over, e-Spirit AG recommends subjecting the specific application (e.g., the generation (Advanced URL Creator) and / or preview (via a page group, sitemap) to sufficient tests.

Restrictions:

- Complex input components can only be used if they are mapped to a FirstSpirit editor column of the corresponding dataset.

- If a field is selected via a foreign key relationship, the unmodified content of the field will still be output from the database, as has always been the case. We recommend only using simple text input components in this instance.
- Please note that when using an appropriate URL generator (such as Advanced URLs), the setting is also used for the file name of the corresponding page. It must be ensured that the content does not exceed the file system's permissible limits for file names, otherwise the files will not be generated. In such a case, error `java.io.FileNotFoundException:...` (File name too long) will be recorded during the generation process.

! If a configuration is impermissible or if the required field cannot be found in the data source, the setting will be ignored and the display name/reference name of the page reference will be output.

Previous behavior:

Previously, the unmodified content of the field was output from the database, which is only appropriate for input components that save plain text (e.g., `CMS_INPUT_TEXT`).

7 SiteArchitect / ServerManager

7.1 Display issue in Java 11 resolved: Dialog transparency

As part of the preliminary work being done on the planned switchover of the FirstSpirit byte code level from Java 8 to Java 11, the Java functionalities used internally are currently being adapted and substituted. By making an internal switchover from `AWTUtilities` to the default Java API, FirstSpirit 2021-03 has also resolved an existing display problem in FirstSpirit running Java 11. In the Java-based FirstSpirit desktop apps (SiteArchitect, ServerManager), dialogs (e.g., Help dialog / About FirstSpirit) are once again displayed with a transparent border.

7.2 FirstSpirit Desktop Apps do not start with Java 8

As part of product maintenance, support for Java 8 was discontinued with FirstSpirit 2020-06. In the process, the Java versions for Oracle Java 8 and AdoptOpenJDK 8 contained in the "FirstSpirit Launcher JRE" module were also removed.

However, older versions of the “FirstSpirit Launcher JRE” module could still be used together with a current version of the FirstSpirit Launcher to start the FirstSpirit Desktop Apps (SiteArchitect, ServerManager). If the “Java 8” option was selected in this older module version, this configuration was still possible.

With the current version 1.0.38 of the FirstSpirit Launcher, this option has now been removed (due to an **incompatibility with Java 16+**). A corresponding configuration (current launcher, older module “FirstSpirit Launcher JRE” with Java 8) results in **the FirstSpirit Desktop Apps no longer starting**. This adjustment is necessary to release FirstSpirit version 2021/04 with support for OpenJDK 16 (non-LTS; Release date 2021-03) (for the FirstSpirit server and the FirstSpirit Desktop Apps).

Are adjustments to the new behavior necessary?

If problems occur when starting the FirstSpirit Desktop Apps (SiteArchitect, ServerManager), please check whether Java 8 is still configured for starting via the “FirstSpirit Launcher JRE” module. In this case, please remove the old configuration.

If problems continue to occur when using the FirstSpirit Launcher or if it is still absolutely necessary to start the FirstSpirit Desktop Apps via Java 8 in your specific FirstSpirit environment (e.g. because the FirstSpirit SiteArchitect uses a customer-specific module that requires Java 8), it is possible to temporarily reactivate the start via Java 8 for a transitional period. To do this, please contact [e-Spirit Technical Support](#).

If the start via Java 8 will be reactivated, the use of Java 16+ with FirstSpirit is not possible.

8 System

8.1 Updates to integrated third-party software

The following internal software has been updated in the latest FirstSpirit release:

ASM (library for analyzing and modifying Java byte code)

Updated from **version 9.0** to **version 9.1**.

9 Deprecations

For e-Spirit, an important goal in software development is to avoid introducing incompatibilities and migration expenditures related to updating from one FirstSpirit release to the next as much as possible or to compensate for these within the software. FirstSpirit updates should generally be deployable with little effort or able to be carried out in a fully automated fashion.

However - not least in order to ensure maintainability and to future-proof the software - e-Spirit cannot fully avoid replacing existing functionality with new mechanisms. In the future, functionality that will be removed from the software will be listed in this section, including the date at which time the functionality will be removed.

Functionality	Deprecated as of	Will be removed/ Was removed as of
Input component CMS_INPUT_CONTENTAREALIST	5.2R3	
Input component CMS_INPUT_CONTENTLIST	5.2R3	
Input component CMS_INPUT_FILE	5.2R3

10 Overview

ID	Description	Categories
CORE-9158	<p>By making an internal switchover from AWTUtilities to the default Java API, FirstSpirit 2021-03 has also resolved an existing display issue in FirstSpirit running Java 11. In the Java-based FirstSpirit desktop apps (SiteArchitect, ServerManager), dialogs (e.g., Help dialog / About FirstSpirit) are once again displayed with a transparent border.</p> <p>Further information can be found in chapter “SiteArchitect / ServerManager: Display issue in Java 11 resolved: Dialog transparency”.</p>	Editor, Java, ServerManager, SiteArchitect
CORE-11999	<p>The “Template inspection” setting is ignored in the case of an output via the “JSON” template set, as the setting may result in an invalid JSON output. The output always takes place as though the option were deactivated.</p>	Developer, Support for JSON, Template Debugger
CORE-12072	<p>Using input components that are not available on the server (anymore) no longer causes the entire form to be shown as incorrect; only the unknown input component is displayed as incorrect.</p> <p>Further information can be found in chapter “Input components: An input component used that is not available on the server (anymore) is identified as incorrect”.</p>	Input Components
CORE-12534	<p>In FirstSpirit 2021-03 and higher, also available for selection for the “Variable for sitemap text” setting is database content whose values are updated in FirstSpirit in complex input components (e.g., CMS_INPUT_DOM).</p> <p>Further information can be found in chapter “SiteArchitect: Improved support for the “Variable for sitemap text” ”.</p>	Developer, Editor, Site Store, SiteArchitect
CORE-12655	<p>Links to remote projects were erroneously requested in a historic preview with the revision information for the current project.</p>	Advanced URL, Developer, Generation, Remote access

ID	Description	Categories
CORE-12750	<p>The manner in which connection settings are configured has been optimized for users and the configuration prepopulated with default settings.</p> <p>Further information can be found in chapter “General: The manner in which connection settings are configured has been optimized for users.”.</p>	FirstSpirit home page, Launcher
CORE-13229	In very rare instances, an extremely large amount of storage space was required (up to an <code>OutOfMemoryException</code>) when using the JSON functionality due to the large log outputs involved. This issue was resolved by shortening the relevant logging procedure appropriately.	Debugging, Generation, Performance, Support for JSON
CORE-13288	<p>Internal software has been updated in the latest FirstSpirit release.</p> <p>Further information can be found in chapter “System: Updates to integrated third-party software”.</p>	FirstSpirit Administrator, Integrated software
CORE-13291	In very rare cases, a <code>NullPointerException</code> could occur during the recursive release of FirstSpirit objects. The error has been fixed.	Editor, Release
CORE-13297	In the latest FirstSpirit version, the JSON function supports direct usage of FirstSpirit's own unique identifiers (UUIDs). This means that queries on the <code>FS_GID</code> in queries used in the Site Store are now correctly converted if the <code>json.resolveDynamicContent</code> option is deactivated. It is also possible now to transfer UUIDs to the JSON function directly. (Previously the UUIDs had to be converted into a string in order to be transferred.)	Developer, Support for JSON
CORE-13301	In very rare instances, an insertion error sometimes occurred in the “Merge” dialog of the version history in FirstSpirit SiteArchitect and when calling the function via the FirstSpirit API (<code>de.espirit.firstspirit.ui.operations.OpenMergeDia</code>). This error has been rectified.	Developer, FirstSpirit API, SiteArchitect, Version history
CORE-13306	If a zip file containing no features is selected when loading a feature, a meaningful error message is now displayed. (<code>Unable to install feature file: Not a feature file, feature parameters not found: <File name></code>)	Content Transport

ID	Description	Categories
CORE-13317	<p>In FirstSpirit 2021-02 and higher, FirstSpirit desktop applications (SiteArchitect, ServerManager) are started automatically for all users via the FirstSpirit Launcher. The <code>externalLauncherGroup</code> parameter (in the <code>fs-server.conf</code> configuration file) is no longer required, therefore, and no longer evaluated. If the parameter is used in the configuration file, this message is output: <code>WARN(...): External launcher groups are configured. This is deprecated since the launcher is always active for all users (...)</code>.</p> <p>For this reason, the Release Notes for FirstSpirit 2021-02 recommended modifying the <code>fs-server.conf</code> configuration file promptly and removing the parameter from any existing configuration. In certain cases, the warning was still erroneously displayed in the log, despite the configuration being correct. This issue has now been resolved.</p>	Developer, Editor, FirstSpirit Administrator, Launcher, ServerManager, SiteArchitect
CORE-13365	Fixed a bug that could cause unnecessary file handles to remain open when updating web applications.	ContentCreator, FirstSpirit Administrator
CORE-13369	<p>The following modules and extensions are compatible with FirstSpirit 2021-03.</p> <p>Further information can be found in chapter “Compatibility: Modules and extensions for FirstSpirit 2021-03”.</p>	Developer, FirstSpirit Administrator, Modules, Server Administrator
CORE-13433	<p>For older versions of the “FirstSpirit Launcher JRE” module, Java 8 could still be configured to start the FirstSpirit Desktop Apps (SiteArchitect, ServerManager) via the FirstSpirit Launcher. With the current version 1.0.38 of the FirstSpirit Launcher, this option has now been removed (due to an incompatibility with Java 16+). A corresponding configuration (current launcher, older module “FirstSpirit Launcher JRE” with Java 8) leads to FirstSpirit Desktop Apps no longer starting.</p> <p>Further information can be found in chapter “SiteArchitect / ServerManager: FirstSpirit Desktop Apps do not start with Java 8”.</p>	Developer, Java, Launcher, ServerManager, SiteArchitect

11.1 Advanced URL

ID	Description
CORE-12655	Links to remote projects were erroneously requested in a historic preview with the revision information for the current project.

11.2 Workflow

ID	Description
CXT-2156	If a user who has started or switched a workflow forward is unknown because, for example, he has been deleted in the meantime, the corresponding entry is now displayed correctly in the “Tasks” report.

11.3 Content Transport

ID	Description
CORE-13306	If a zip file containing no features is selected when loading a feature, a meaningful error message is now displayed. (Unable to install feature file: Not a feature file, feature parameters not found: <File name>)

11.4 ContentCreator

ID	Description
CORE-13365	Fixed a bug that could cause unnecessary file handles to remain open when updating web applications.
CXT-1666	The settings made under “Appearance in editor” for format templates (e.g., for text, background, and border colors) are now again taken into account in ContentCreator in the rich text editors using them (CMS_INPUT_DOM and CMS_INPUT_DOMTABLE).

ID	Description
CXT-1778	<p>In addition to an upload from the workstation computer, images can now also be uploaded from other browser windows/tabs in ContentCreator.</p> <p>Further information can be found in chapter “ContentCreator: Image upload now also from other browser windows/tab”.</p>
CXT-2078	<p>Upload of media with insufficient permissions</p> <p>Further information can be found in chapter “ContentCreator: Upload of media with insufficient permissions”.</p>
CXT-2106	<p>The visualization of invalid format templates in CMS_INPUT_DOM and CMS_INPUT_DOMTABLE has been modified.</p> <p>Further information can be found in chapter “ContentCreator: Visualization of invalid format templates (CMS_INPUT_DOM/TABLE)”.</p>
CXT-2156	<p>If a user who has started or switched a workflow forward is unknown because, for example, he has been deleted in the meantime, the corresponding entry is now displayed correctly in the “Tasks” report.</p>
CXT-2157	<p>In the case of long-running script operations with client interactions, it was possible that threads were not terminated correctly. This occurred under certain circumstances if the user closed the ContentCreator before the script could request the client interaction (for example <code>de.espirit.firstspirit.ui.operations.RequestOperation</code>).</p>

11.5 Debugging

ID	Description
CORE-13229	<p>In very rare instances, an extremely large amount of storage space was required (up to an <code>OutOfMemoryException</code>) when using the JSON functionality due to the large log outputs involved. This issue was resolved by shortening the relevant logging procedure appropriately.</p>
CXT-2006	<p>Logging in case a variant cannot be created in FragmentCreator via the “Translated” button because the “TranslationStudio” module is not configured correctly has been improved. In addition, the message “The variant could not be created” is displayed in the client.</p>

11.6 Input Components

ID	Description
CORE-12072	<p>Using input components that are not available on the server (anymore) no longer causes the entire form to be shown as incorrect; only the unknown input component is displayed as incorrect.</p> <p>Further information can be found in chapter “Input components: An input component used that is not available on the server (anymore) is identified as incorrect”.</p>
CXT-1204	<p>New layout options for input components now allow better clarity: groupings and side-by-side display.</p> <p>Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): FragmentCreator: Displaying input components side by side or in groups”.</p>
CXT-1666	<p>The settings made under “Appearance in editor” for format templates (e.g., for text, background, and border colors) are now again taken into account in ContentCreator in the rich text editors using them (CMS_INPUT_DOM and CMS_INPUT_DOMTABLE).</p>
CXT-1778	<p>In addition to an upload from the workstation computer, images can now also be uploaded from other browser windows/tabs in ContentCreator.</p> <p>Further information can be found in chapter “ContentCreator: Image upload now also from other browser windows/tab”.</p>
CXT-2078	<p>Upload of media with insufficient permissions</p> <p>Further information can be found in chapter “ContentCreator: Upload of media with insufficient permissions”.</p>
CXT-2106	<p>The visualization of invalid format templates in CMS_INPUT_DOM and CMS_INPUT_DOMTABLE has been modified.</p> <p>Further information can be found in chapter “ContentCreator: Visualization of invalid format templates (CMS_INPUT_DOM/TABLE)”.</p>

11.7 Developer

ID	Description
CORE-11999	The “Template inspection” setting is ignored in the case of an output via the “JSON” template set, as the setting may result in an invalid JSON output. The output always takes place as though the option were deactivated.
CORE-12534	<p>In FirstSpirit 2021-03 and higher, also available for selection for the “Variable for sitemap text” setting is database content whose values are updated in FirstSpirit in complex input components (e.g., CMS_INPUT_DOM).</p> <p>Further information can be found in chapter “SiteArchitect: Improved support for the "Variable for sitemap text" ”.</p>
CORE-12655	Links to remote projects were erroneously requested in a historic preview with the revision information for the current project.
CORE-13297	In the latest FirstSpirit version, the JSON function supports direct usage of FirstSpirit's own unique identifiers (UUIDs). This means that queries on the FS_GID in queries used in the Site Store are now correctly converted if the <code>json.resolveDynamicContent</code> option is deactivated. It is also possible now to transfer UUIDs to the JSON function directly. (Previously the UUIDs had to be converted into a string in order to be transferred.)
CORE-13301	In very rare instances, an insertion error sometimes occurred in the “Merge” dialog of the version history in FirstSpirit SiteArchitect and when calling the function via the FirstSpirit API (<code>de.espirit.firstspirit.ui.operations.OpenMergeDialogOperation</code>). This error has been rectified.
CORE-13317	<p>In FirstSpirit 2021-02 and higher, FirstSpirit desktop applications (SiteArchitect, ServerManager) are started automatically for all users via the FirstSpirit Launcher. The <code>externalLauncherGroup</code> parameter (in the <code>fs-server.conf</code> configuration file) is no longer required, therefore, and no longer evaluated. If the parameter is used in the configuration file, this message is output: <code>WARN(...): External launcher groups are configured. This is deprecated since the launcher is always active for all users (...)</code>.</p> <p>For this reason, the Release Notes for FirstSpirit 2021-02 recommended modifying the <code>fs-server.conf</code> configuration file promptly and removing the parameter from any existing configuration. In certain cases, the warning was still erroneously displayed in the log, despite the configuration being correct. This issue has now been resolved.</p>
CORE-13369	The following modules and extensions are compatible with FirstSpirit 2021-03.

ID	Description
	Further information can be found in chapter “Compatibility: Modules and extensions for FirstSpirit 2021-03”.
CORE-13433	<p>For older versions of the “FirstSpirit Launcher JRE” module, Java 8 could still be configured to start the FirstSpirit Desktop Apps (SiteArchitect, ServerManager) via the FirstSpirit Launcher. With the current version 1.0.38 of the FirstSpirit Launcher, this option has now been removed (due to an incompatibility with Java 16+). A corresponding configuration (current launcher, older module “FirstSpirit Launcher JRE” with Java 8) leads to FirstSpirit Desktop Apps no longer starting.</p> <p>Further information can be found in chapter “SiteArchitect / ServerManager: FirstSpirit Desktop Apps do not start with Java 8”.</p>
CXT-1204	<p>New layout options for input components now allow better clarity: groupings and side-by-side display.</p> <p>Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): FragmentCreator: Displaying input components side by side or in groups”.</p>
CXT-1666	The settings made under “Appearance in editor” for format templates (e.g., for text, background, and border colors) are now again taken into account in ContentCreator in the rich text editors using them (CMS_INPUT_DOM and CMS_INPUT_DOMTABLE).
CXT-2006	Logging in case a variant cannot be created in FragmentCreator via the “Translated” button because the “TranslationStudio” module is not configured correctly has been improved. In addition, the message “The variant could not be created” is displayed in the client.
CXT-2078	<p>Upload of media with insufficient permissions</p> <p>Further information can be found in chapter “ContentCreator: Upload of media with insufficient permissions”.</p>
CXT-2155	<p>FirstSpirit Content Experience Tools: Latest module versions</p> <p>Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): Latest module versions”.</p>
CXT-2157	In the case of long-running script operations with client interactions, it was possible that threads were not terminated correctly. This occurred under certain circumstances if the user closed the ContentCreator before the script could request the client interaction (for example <code>de.espirit.firstspirit.ui.operations.RequestOperation</code>).

ID	Description
DEVEX-467	<p>FSDevTools: When updating modules using command</p> <pre>bin\fs-cli (...) module installBulk --moduleConfigFile "path/to/configFile.json" --deployWebApps true</pre> <p>very rare errors sometimes occurred when deploying the web apps: <code>ERROR Error deploying web app (...)!.</code> The issue arose if no active web server was configured for local project web apps. In the latest FSDevTools release (release 2.6.6), these incorrectly configured web apps (and local project web apps from deactivated projects) are no longer deployed. A warning in the <code>fs-cli.log</code> log file indicates this misconfiguration: <code>WARN Filtered project local web app for project '[project]', project has no active webserver set.</code></p>

11.8 FirstSpirit Content Experience Tools (CXT)

ID	Description
CXT-1204	<p>New layout options for input components now allow better clarity: groupings and side-by-side display.</p> <p>Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): FragmentCreator: Displaying input components side by side or in groups”.</p>
CXT-2006	<p>Logging in case a variant cannot be created in FragmentCreator via the “Translated” button because the “TranslationStudio” module is not configured correctly has been improved. In addition, the message “The variant could not be created” is displayed in the client.</p>

ID	Description
	Further information can be found in chapter “General: The manner in which connection settings are configured has been optimized for users.”.

11.10 FirstSpirit Administrator

ID	Description
CORE-13288	<p>Internal software has been updated in the latest FirstSpirit release.</p> <p>Further information can be found in chapter “System: Updates to integrated third-party software”.</p>
CORE-13317	<p>In FirstSpirit 2021-02 and higher, FirstSpirit desktop applications (SiteArchitect, ServerManager) are started automatically for all users via the FirstSpirit Launcher. The <code>externalLauncherGroup</code> parameter (in the <code>fs-server.conf</code> configuration file) is no longer required, therefore, and no longer evaluated. If the parameter is used in the configuration file, this message is output: <code>WARN(...): External launcher groups are configured. This is deprecated since the launcher is always active for all users (...)</code>.</p> <p>For this reason, the Release Notes for FirstSpirit 2021-02 recommended modifying the <code>fs-server.conf</code> configuration file promptly and removing the parameter from any existing configuration. In certain cases, the warning was still erroneously displayed in the log, despite the configuration being correct. This issue has now been resolved.</p>
CORE-13365	Fixed a bug that could cause unnecessary file handles to remain open when updating web applications.
CORE-13369	<p>The following modules and extensions are compatible with FirstSpirit 2021-03.</p> <p>Further information can be found in chapter “Compatibility: Modules and extensions for FirstSpirit 2021-03”.</p>
CXT-2006	Logging in case a variant cannot be created in FragmentCreator via the “Translated” button because the “TranslationStudio” module is not configured correctly has been improved. In addition, the message “The variant could not be created” is displayed in the client.
CXT-2155	<p>FirstSpirit Content Experience Tools: Latest module versions</p> <p>Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): Latest module versions”.</p>

ID	Description
CXT-2156	If a user who has started or switched a workflow forward is unknown because, for example, he has been deleted in the meantime, the corresponding entry is now displayed correctly in the “Tasks” report.
CXT-2157	In the case of long-running script operations with client interactions, it was possible that threads were not terminated correctly. This occurred under certain circumstances if the user closed the ContentCreator before the script could request the client interaction (for example <code>de.espirit.firstspirit.ui.operations.RequestOperation</code>).

11.11 FirstSpirit API

ID	Description
CORE-13301	In very rare instances, an insertion error sometimes occurred in the “Merge” dialog of the version history in FirstSpirit SiteArchitect and when calling the function via the FirstSpirit API (<code>de.espirit.firstspirit.ui.operations.OpenMergeDialogOperation</code>). This error has been rectified.

11.12 FragmentCreator

ID	Description
CXT-642	<p>Generation of elements (fragments, media, pages) from remote projects, which have been referenced via a “Fragment DAP”, “Media DAP”, or “PageRef DAP” module.</p> <p>Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): Generating referenced elements from remote projects”.</p>
CXT-1204	<p>New layout options for input components now allow better clarity: groupings and side-by-side display.</p> <p>Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): FragmentCreator: Displaying input components side by side or in groups”.</p>
CXT-2006	Logging in case a variant cannot be created in FragmentCreator via the “Translated” button because the “TranslationStudio” module is not configured correctly has been improved. In addition, the message “The variant could not be created” is displayed in the client.

ID	Description
CXT-2155	FirstSpirit Content Experience Tools: Latest module versions Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): Latest module versions”.

11.13 Release

ID	Description
CORE-13291	In very rare cases, a <i>NullPointerException</i> could occur during the recursive release of FirstSpirit objects. The error has been fixed.

11.14 FSDevTools

ID	Description
DEVEX-467	<p>FSDevTools: When updating modules using command</p> <pre>bin\fs-cli (...) module installBulk --moduleConfigFile "path/to/configFile.json" --deployWebApps true</pre> <p>very rare errors sometimes occurred when deploying the web apps: <code>ERROR Error deploying web app (...)!.</code> The issue arose if no active web server was configured for local project web apps. In the latest FSDevTools release (release 2.6.6), these incorrectly configured web apps (and local project web apps from deactivated projects) are no longer deployed. A warning in the <code>fs-cli.log</code> log file indicates this misconfiguration: <code>WARN Filtered project local web app for project '[project]', project has no active webserver set.</code></p>

11.15 Generation

ID	Description
CORE-12655	Links to remote projects were erroneously requested in a historic preview with the revision information for the current project.

ID	Description
CORE-13229	In very rare instances, an extremely large amount of storage space was required (up to an <code>OutOfMemoryException</code>) when using the JSON functionality due to the large log outputs involved. This issue was resolved by shortening the relevant logging procedure appropriately.

11.16 Integrated software

ID	Description
CORE-13288	Internal software has been updated in the latest FirstSpirit release. Further information can be found in chapter “System: Updates to integrated third-party software”.

11.17 Java

ID	Description
CORE-9158	By making an internal switchover from AWTUtilities to the default Java API, FirstSpirit 2021-03 has also resolved an existing display issue in FirstSpirit running Java 11. In the Java-based FirstSpirit desktop apps (SiteArchitect, ServerManager), dialogs (e.g., Help dialog / About FirstSpirit) are once again displayed with a transparent border. Further information can be found in chapter “SiteArchitect / ServerManager: Display issue in Java 11 resolved: Dialog transparency”.
CORE-13433	For older versions of the “FirstSpirit Launcher JRE” module, Java 8 could still be configured to start the FirstSpirit Desktop Apps (SiteArchitect, ServerManager) via the FirstSpirit Launcher. With the current version 1.0.38 of the FirstSpirit Launcher, this option has now been removed (due to an incompatibility with Java 16+). A corresponding configuration (current launcher, older module “FirstSpirit Launcher JRE” with Java 8) leads to FirstSpirit Desktop Apps no longer starting. Further information can be found in chapter “SiteArchitect / ServerManager: FirstSpirit Desktop Apps do not start with Java 8”.

11.18 Support for JSON

ID	Description
CORE-11999	The “Template inspection” setting is ignored in the case of an output via the “JSON” template set, as the setting may result in an invalid JSON output. The output always takes place as though the option were deactivated.
CORE-13229	In very rare instances, an extremely large amount of storage space was required (up to an <code>OutOfMemoryException</code>) when using the JSON functionality due to the large log outputs involved. This issue was resolved by shortening the relevant logging procedure appropriately.
CORE-13297	In the latest FirstSpirit version, the JSON function supports direct usage of FirstSpirit's own unique identifiers (UUIDs). This means that queries on the FS_GID in queries used in the Site Store are now correctly converted if the <code>json.resolveDynamicContent</code> option is deactivated. It is also possible now to transfer UUIDs to the JSON function directly. (Previously the UUIDs had to be converted into a string in order to be transferred.)

11.19 Launcher

ID	Description
CORE-12750	<p>The manner in which connection settings are configured has been optimized for users and the configuration prepopulated with default settings.</p> <p>Further information can be found in chapter “General: The manner in which connection settings are configured has been optimized for users.”.</p>
CORE-13317	<p>In FirstSpirit 2021-02 and higher, FirstSpirit desktop applications (SiteArchitect, ServerManager) are started automatically for all users via the FirstSpirit Launcher. The <code>externalLauncherGroup</code> parameter (in the <code>fs-server.conf</code> configuration file) is no longer required, therefore, and no longer evaluated. If the parameter is used in the configuration file, this message is output: <code>WARN(...): External launcher groups are configured. This is deprecated since the launcher is always active for all users (...).</code></p> <p>For this reason, the Release Notes for FirstSpirit 2021-02 recommended modifying the <code>fs-server.conf</code> configuration file promptly and removing the parameter from any existing configuration. In certain cases, the warning was still erroneously displayed in the log, despite the configuration being correct. This issue has now been resolved.</p>

ID	Description
CORE-13433	<p>For older versions of the “FirstSpirit Launcher JRE” module, Java 8 could still be configured to start the FirstSpirit Desktop Apps (SiteArchitect, ServerManager) via the FirstSpirit Launcher. With the current version 1.0.38 of the FirstSpirit Launcher, this option has now been removed (due to an incompatibility with Java 16+). A corresponding configuration (current launcher, older module “FirstSpirit Launcher JRE” with Java 8) leads to FirstSpirit Desktop Apps no longer starting.</p> <p>Further information can be found in chapter “SiteArchitect / ServerManager: FirstSpirit Desktop Apps do not start with Java 8”.</p>

11.20 Media

ID	Description
CXT-1778	<p>In addition to an upload from the workstation computer, images can now also be uploaded from other browser windows/tabs in ContentCreator.</p> <p>Further information can be found in chapter “ContentCreator: Image upload now also from other browser windows/tab”.</p>
CXT-2078	<p>Upload of media with insufficient permissions</p> <p>Further information can be found in chapter “ContentCreator: Upload of media with insufficient permissions”.</p>

ID	Description
CXT-1778	<p>In addition to an upload from the workstation computer, images can now also be uploaded from other browser windows/tabs in ContentCreator.</p> <p>Further information can be found in chapter “ContentCreator: Image upload now also from other browser windows/tab”.</p>

11.22 Modules

ID	Description
CORE-13369	The following modules and extensions are compatible with FirstSpirit 2021-03. Further information can be found in chapter “Compatibility: Modules and extensions for FirstSpirit 2021-03”.
CXT-2155	FirstSpirit Content Experience Tools: Latest module versions Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): Latest module versions”.

11.23 Performance

ID	Description
CORE-13229	In very rare instances, an extremely large amount of storage space was required (up to an <code>OutOfMemoryException</code>) when using the JSON functionality due to the large log outputs involved. This issue was resolved by shortening the relevant logging procedure appropriately.

11.24 Permissions

ID	Description
CXT-2078	Upload of media with insufficient permissions Further information can be found in chapter “ContentCreator: Upload of media with insufficient permissions”.

11.25 Editor

ID	Description
CORE-9158	By making an internal switchover from AWTUtilities to the default Java API, FirstSpirit 2021-03 has also resolved an existing display issue in FirstSpirit running Java 11. In the Java-based

ID	Description
	<p>FirstSpirit desktop apps (SiteArchitect, ServerManager), dialogs (e.g., Help dialog / About FirstSpirit) are once again displayed with a transparent border.</p> <p>Further information can be found in chapter “SiteArchitect / ServerManager: Display issue in Java 11 resolved: Dialog transparency”.</p>
CORE-12534	<p>In FirstSpirit 2021-03 and higher, also available for selection for the “Variable for sitemap text” setting is database content whose values are updated in FirstSpirit in complex input components (e.g., CMS_INPUT_DOM).</p> <p>Further information can be found in chapter “SiteArchitect: Improved support for the "Variable for sitemap text" ”.</p>
CORE-13291	<p>In very rare cases, a <i>NullPointerException</i> could occur during the recursive release of FirstSpirit objects. The error has been fixed.</p>
CORE-13317	<p>In FirstSpirit 2021-02 and higher, FirstSpirit desktop applications (SiteArchitect, ServerManager) are started automatically for all users via the FirstSpirit Launcher. The <code>externalLauncherGroup</code> parameter (in the <code>fs-server.conf</code> configuration file) is no longer required, therefore, and no longer evaluated. If the parameter is used in the configuration file, this message is output: <code>WARN(...): External launcher groups are configured. This is deprecated since the launcher is always active for all users (...)</code>.</p> <p>For this reason, the Release Notes for FirstSpirit 2021-02 recommended modifying the <code>fs-server.conf</code> configuration file promptly and removing the parameter from any existing configuration. In certain cases, the warning was still erroneously displayed in the log, despite the configuration being correct. This issue has now been resolved.</p>
CXT-1204	<p>New layout options for input components now allow better clarity: groupings and side-by-side display.</p> <p>Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): FragmentCreator: Displaying input components side by side or in groups”.</p>
CXT-1666	<p>The settings made under “Appearance in editor” for format templates (e.g., for text, background, and border colors) are now again taken into account in ContentCreator in the rich text editors using them (CMS_INPUT_DOM and CMS_INPUT_DOMTABLE).</p>
CXT-1778	<p>In addition to an upload from the workstation computer, images can now also be uploaded from other browser windows/tabs in ContentCreator.</p>

ID	Description
	Further information can be found in chapter “ContentCreator: Image upload now also from other browser windows/tab”.
CXT-2006	Logging in case a variant cannot be created in FragmentCreator via the “Translated” button because the “TranslationStudio” module is not configured correctly has been improved. In addition, the message “The variant could not be created” is displayed in the client.
CXT-2078	Upload of media with insufficient permissions Further information can be found in chapter “ContentCreator: Upload of media with insufficient permissions”.
CXT-2106	The visualization of invalid format templates in CMS_INPUT_DOM and CMS_INPUT_DOMTABLE has been modified. Further information can be found in chapter “ContentCreator: Visualization of invalid format templates (CMS_INPUT_DOM/TABLE)”.
CXT-2156	If a user who has started or switched a workflow forward is unknown because, for example, he has been deleted in the meantime, the corresponding entry is now displayed correctly in the “Tasks” report.
CXT-2157	In the case of long-running script operations with client interactions, it was possible that threads were not terminated correctly. This occurred under certain circumstances if the user closed the ContentCreator before the script could request the client interaction (for example <code>de.espirit.firstspirit.ui.operations.RequestOperation</code>).

11.26 Remote access

ID	Description
CORE-12655	Links to remote projects were erroneously requested in a historic preview with the revision information for the current project.
CXT-2078	Upload of media with insufficient permissions Further information can be found in chapter “ContentCreator: Upload of media with insufficient permissions”.

11.27 Reports

ID	Description
CXT-2156	If a user who has started or switched a workflow forward is unknown because, for example, he has been deleted in the meantime, the corresponding entry is now displayed correctly in the “Tasks” report.

11.28 Server Administrator

ID	Description
CORE-13369	The following modules and extensions are compatible with FirstSpirit 2021-03. Further information can be found in chapter “Compatibility: Modules and extensions for FirstSpirit 2021-03”.

11.29 ServerManager

ID	Description
CORE-9158	By making an internal switchover from AWTUtilities to the default Java API, FirstSpirit 2021-03 has also resolved an existing display issue in FirstSpirit running Java 11. In the Java-based FirstSpirit desktop apps (SiteArchitect, ServerManager), dialogs (e.g., Help dialog / About FirstSpirit) are once again displayed with a transparent border. Further information can be found in chapter “SiteArchitect / ServerManager: Display issue in Java 11 resolved: Dialog transparency”.
CORE-13317	In FirstSpirit 2021-02 and higher, FirstSpirit desktop applications (SiteArchitect, ServerManager) are started automatically for all users via the FirstSpirit Launcher. The <code>externalLauncherGroup</code> parameter (in the <code>fs-server.conf</code> configuration file) is no longer required, therefore, and no longer evaluated. If the parameter is used in the configuration file, this message is output: <code>WARN(...): External launcher groups are configured. This is deprecated since the launcher is always active for all users (...)</code> .

ID	Description
	<p>For this reason, the Release Notes for FirstSpirit 2021-02 recommended modifying the <code>fs-server.conf</code> configuration file promptly and removing the parameter from any existing configuration. In certain cases, the warning was still erroneously displayed in the log, despite the configuration being correct. This issue has now been resolved.</p>
CORE-13433	<p>For older versions of the “FirstSpirit Launcher JRE” module, Java 8 could still be configured to start the FirstSpirit Desktop Apps (SiteArchitect, ServerManager) via the FirstSpirit Launcher. With the current version 1.0.38 of the FirstSpirit Launcher, this option has now been removed (due to an incompatibility with Java 16+). A corresponding configuration (current launcher, older module “FirstSpirit Launcher JRE” with Java 8) leads to FirstSpirit Desktop Apps no longer starting.</p> <p>Further information can be found in chapter “SiteArchitect / ServerManager: FirstSpirit Desktop Apps do not start with Java 8”.</p>

11.30 SiteArchitect

ID	Description
CORE-9158	<p>By making an internal switchover from AWTUtilities to the default Java API, FirstSpirit 2021-03 has also resolved an existing display issue in FirstSpirit running Java 11. In the Java-based FirstSpirit desktop apps (SiteArchitect, ServerManager), dialogs (e.g., Help dialog / About FirstSpirit) are once again displayed with a transparent border.</p> <p>Further information can be found in chapter “SiteArchitect / ServerManager: Display issue in Java 11 resolved: Dialog transparency”.</p>
CORE-12534	<p>In FirstSpirit 2021-03 and higher, also available for selection for the “Variable for sitemap text” setting is database content whose values are updated in FirstSpirit in complex input components (e.g., <code>CMS_INPUT_DOM</code>).</p> <p>Further information can be found in chapter “SiteArchitect: Improved support for the “Variable for sitemap text” ”.</p>
CORE-13301	<p>In very rare instances, an insertion error sometimes occurred in the “Merge” dialog of the version history in FirstSpirit SiteArchitect and when calling the function via the FirstSpirit API (<code>de.espirit.firstspirit.ui.operations.OpenMergeDialogOperation</code>). This error has been rectified.</p>

11.31 Site Store

ID	Description
CORE-12534	<p>In FirstSpirit 2021-03 and higher, also available for selection for the “Variable for sitemap text” setting is database content whose values are updated in FirstSpirit in complex input components (e.g., <code>CMS_INPUT_DOM</code>).</p> <p>Further information can be found in chapter “SiteArchitect: Improved support for the “Variable for sitemap text” ”.</p>

11.32 Version history

ID	Description
CORE-13301	In very rare instances, an insertion error sometimes occurred in the “Merge” dialog of the version history in FirstSpirit SiteArchitect and when calling the function via the FirstSpirit API (<code>de.espirit.firstspirit.ui.operations.OpenMergeDialogOperation</code>). This error has been rectified.

11.33 Template Debugger

ID	Description
CORE-11999	The “Template inspection” setting is ignored in the case of an output via the “JSON” template set, as the setting may result in an invalid JSON output. The output always takes place as though the option were deactivated.

11.34 Template Development

ID	Description
CXT-1204	New layout options for input components now allow better clarity: groupings and side-by-side display. Further information can be found in chapter “FirstSpirit Content Experience Tools (CXT): FragmentCreator: Displaying input components side by side or in groups”.
